General Information

The shelf life of bottled honey and Snap Packs is 5 years.

The shelf life of honey lozenges is 3 years.

42° South Manuka Honey is guaranteed 'raw' and certified 'Monofloral' Manuka, meaning it only contains nectar from the Manuka flower.

42° South Manuka Honey

A strict chain of custody (e-cert) is maintained from the bee keeper to the processor to the shipping company. Prior to processing, our honey is tested by an independent laboratory and the results provided to the New Zealand Ministry for Primary Industries (MPI). Based on the laboratory results and the e-cert documentation, MPI certify the honey is 'Monofloral' manuka. Once all of these criteria have been met, MPI issue an NZ Export Certificate which accompanies the shipment to meet the destination country's import requirements.

Mono-floral Manuka,
meaning it only
contains nectar from
the Manuka flower.
